San Luis Obispo County resident Irv McMillan is dragged away after arrest for trespassing at Diablo Canyon nuclear power plant, which yesterday began gearing up for low-power testing.

## Diablo tests begin; professor arrested

by Margarita Mills

Asst. Managing Editor

As the Diablo Canyon nuclear power plant prepares to begin low power testing, three people, including one Cal Poly professor, were arrested Thursday as opponents continued to protest at the plant's gates.

Spokeswoman for Pacific Gas & Electric Co. Sue Brown said about 30 people gathered outside the plant's property gates Thursday morning to continue protesting.

The U.S. District Court of Appeals in Washington, D.C. Wednesday afternoon rejected a request by the San Luis Obispo Mothers for Peace for an injunction to prevent testing to begin at the plant.

Political Science Professor Richard Kranzdorf was arrested at around 10:30 a.m. by county sheriff officers, charged with acts of civil disobedience.

"I went down there just to see what was going on; I had no intent of being arrested," Kranzdorf said. "But I kept looking at the road, looking at the gate and looking at the little security booth in front, and I had to act accordingly." Kranzdorf crossed over the blue line indicating Diablo property, reading "Mourner's Kaddish," a Hebrew prayer for the dead.

Among the protestors was one group of six California Democratic candidates for Congress and senate who are in support of nuclear power. The group was associated with Lyndon Laroche, a presidential candidate who has had his name put on a few states' ballots.

Brown said although actual testing was scheduled to begin Thursday, tests at 3 percent capacity probably won't start until Monday. The low-power license gives Diablo permission to test at 5 percent.

The first step of preparation began Thursday, she said, with the two-day job of heating water by friction.

## OH professor provides expertise for fertilizer test

by Susan Dethlefsen

Staff Writer

A Cal Poly professor's research formed the heart of a story published last month in *Sunset Magazine*, the magazine's Garden Editor said Wednesday.

In her lecture sponsored by the Ornamental Horticulture Club, Kathleen Brenzel said Robert Rice, associate professor of Ornamental Horticulture, provided the testing and expertise on an article about the best kind of fertilizer to use on plants.

After *Sunset* researched and found all

the fertilizers available on the market, Rice was asked to develop tests for finding out which was most effective and then conduct the experiments.

After 400 tests all photographed step-by-step by *Sunset*, Rice found all that's needed for plants is nitrogen fertilizer, said Brenzel. She added that a lot of people in the fertilizing industry were mad at *Sunset* for publishing the results because many fertilizers on the market are phosphorus based.

The article, which took more than three years to research, was published in the April 1984 edition of *Sunset* and

mentions Cal Poly in the first sentence.

In addition to describing Cal Poly's role in the fertilizer article, Brenzel explained to the audience of 60 how other *Sunset* garden articles are developed and written.

That includes stories written with the help of the readers, said Brenzel. When *Sunset* decided to write an article on tomatoes, they sent a query to readers asking their opinion on the best and worst tomatoes.

"Not only were we going to experts, but we were going to the readers who actually grow them, and we got a good

guide from them," said Brenzel.

Besides relying on research and readers, stories are also produced through interviews with experts, visiting gardens with landscape architects and by taking plant portraits, Brenzel explained.

Plant portraits are an effective way of relaying information, she said. These include a close up photograph of a plant along with a story about it.

"As the result of one of these articles, nurseries had 9,000 requests (for the plant) and some are still coming in," said Brenzel.

## Assault suspect arrested, faces numerous charges

by Karen Ellichman

Staff Writer

San Luis Obispo police have apprehended a man suspected of assaulting a Cal Poly student in her home, Tuesday said a member of the Public Safety Department.

Cal Poly police investigator Ray Berrett said Ronald Andrew Stephens of San Luis Obispo was arrested Wednesday afternoon and charged with resisting arrest, attempted rape, burglary and seven counts of indecent exposure. Stephens was positively identified by the victim of Tuesday's assault and by a South County victim of indecent exposure.

SLO police detective Jim English arrested Stephens after recognizing him from a description given by the Cal Poly women. English spotted the suspect driving near Pismo Street in a green Volkswagen.

The suspect fled his car after the police officer pulled him over on a traffic stop, and English chased him through yards and over fences before apprehending him, said Berrett.

Stephens was arrested in the 400 block of Pismo Street and a red station wagon matching the description given by Tuesday's victim was found nearby.

The suspect remains in county jail and bail has been set at \$7,500.

## Former Daily editor wins Pulitzer Prize

by Michael Marter

Staff Writer

A dream came true this week for 1969 Cal Poly Journalism graduate George Ramos.

Ramos and 16 other *Los Angeles Times* editors, reporters, and photographers won a Pulitzer Prize gold medal for meritorious public service. The medal was awarded in recognition of a 27 part, three-week series published last summer on Southern California's Latino community.

A former *Mustang Daily* editor, Ramos acted as a project co-editor on the Latino series.

The team of Latinos who produced the series spent seven months conducting over 1,000 interviews and polling over 1,500 people on issues relevant to the Latino population of Los Angeles.

An ad run by the *Times* said the series "stretched beyond the stereotypes of race and culture to look into the past, present and possible future of this diverse ethnic community."

Ramos explained that the time was ripe for a series detailing the dynamic changes within the Latino community of Los Angeles and its subsequent unrest.

The series sought to go beyond the day to day coverage of Latino issues that were largely responsible for the fostering of stereotypes of Latinos, Ramos said.

Instead of reporting the statistics of Latino pro-

blems in the public education system, the series was conducive to a fresh approach that would explain what cultural factors were responsible for Latinos often being educational underachievers, Ramos said.

Ramos and other members of the Latino series team also explored the concept of Latino role models and how they affect what Latino children strive for, or don't strive for, because of a lack of role models.

"We don't have many Steve Garveys," Ramos said.

The series also examined Latino artists, authors and painters as well as the relationship of American-born Latinos with the governments of their native countries, said Ramos, referring to the significant differences between American and Mexican foreign policies.

When Ramos was hired by the *Times* in 1978, only two Latinos were employed as reporters on the newspaper's Metro section. With an Affirmative Action hiring policy, minorities of many backgrounds now fill positions throughout the *Times* organization, Ramos said.

Ramos said with a well-rounded staff, editors are much more in tune with various ethnic communities. "Editors are a lot more cognizant of what is going on," Ramos said. In essence, the more integrated staff has brought new coverage to areas previously not covered in depth.

Not to mention a Pulitzer Prize.

## Cal Poly is watching you

Public Safety Department — most students know of it from the people who put the little pink tickets on their car when they park illegally just to run in a building for a minute.

Issuing tickets is just one aspect of the Public Safety Department. The department has proposed a Resident Watch program that they hope to implement into the campus residence halls upon approval from Cal Poly officials. The approval of this program would be a good move.

The Resident Watch program will be modeled after the Neighborhood Watch programs that are now being organized in many cities across the nation.

In the Neighborhood Watch program several streets are organized into blocks. One resident, acting as the block captain, is kept posted about neighbors' vacations. Police investigator Ray Berrett said that the dormitories will be similarly organized. Each hall will act as a block. Members of the public safety staff will train the resident advisers of the dorms to organize the blocks and to give feedback to the department on how the Resident Watch program is progressing.

This program may help students become more aware of their surroundings and the strange people who maybe lurking in the hallways.

Crimes could be prevented if residents are made aware of the procedures for reporting any suspicious acts.

The Public Safety Department should be commended for this effort. Too often they are blasted for not doing anything but issuing tickets. Too many people don't realize they do more than just give tickets.

### Proposed complex praised

Editor:

Recently I have heard many comments concerning the proposed recreational-entertainment complex which display a lack of knowledge and understanding of the facts and possibilities.

Currently, the open use of the main gym, pools, weight room, racquetball courts and fields is restricted to set hours and is pre-empted by all inter-collegiate athletic events and PE classes. More than 8,000 students (more than 50% of all the students) make use of these facilities for open recreation and intramurals, and this is in addition to those students who attend concerts. In most cases the facilities themselves are worn out, outdated and too small. This results on overcrowded facilities and many dissatisfied students.

Intramural basketball games, during the Winter quarters, must be scheduled until two in the morning because of high player interest and lack of facility time. The demand for racquetball courts is so great that available play hours fill up within a half hour after the Recreational Sports Office begins taking them for the following day. All intramural sports have repeatedly experienced the cancellation of games at the last minute because of athletic events or practices which are not previously announced, leaving team members and intramural employees frustrated. As far as concerts go, Cal Poly can only draw acts which

are willing to perform in front of a 3,000-person crowd and this cuts out the most worthwhile groups.

With the new facility, student groups, the ASI Program Board and Recreational Sports will have first priority for its use. We would have a modern gym, weight room, pool, and 10 to 14 racquetball courts. Just think, any time you wanted to use the weight room or go swimming, the facility would be open and chances of it being overcrowded would be slim. All students would have free use. Cal Poly would attract bigger name acts because of the 6,000-person seating capacity the new gym would offer. Clubs and student groups would no longer have a difficult time scheduling their meetings and events.

Another factor I would like to address is the fee increase and its burden on the students. First of all, students already received word of a \$42 fee reduction for the 1984-85 school year. Further, any student who is financially troubled will be looking into financial aid. And if they are in need, they will receive aid which will cover the proposed fee increase.

I think this new facility would benefit this campus for years to come. We would be offering a much more comprehensive and varied health and fitness program and the students would gain tremendously from it.

Michelle Brabant

### Student defends Creighton

Editor:

I am writing this letter in response to the Editorial in the Mustang Daily, dated Tuesday, April 17, in which you criticized Kevin Creighton, newly elected A.S.I. President.

First of all, I was present on the eve of Kevin's election when Kevin was notified of his victory. I was also present during his conversation with KCPR. I was appalled and extremely dismayed to discover that the winners of the elections, both officers and senators alike, would not be notified over the air of their victories — for many, this might have been their only means of notification. I would also like to point out that Kevin's demands were purely altruistic and in the best interests of the other candidates because he had already been notified of the out-

come. However, the reason given by the disc jockey for not announcing this student information is that she had been receiving numerous calls regarding the outcome, some of which had been rather rude. Is this any reason to hold back information pertaining to the rest of the student body? I think not. I think her attitude was completely unprofessional and unethical.

This year I have been working with KCPR with regards to moving the transmitter to Cuesta Park. However, I am beginning to wonder about the purpose of KCPR. If its purpose isn't to broadcast student information (it is a journalism lab is it not?), what exactly is its purpose?

Linda L. Eberl

A.S.I. Administrative Coordinator

### Graphic Systems criticized

Editor:

I am writing this letter to inform the students of Cal Poly that should they have any printing needs, such as a resume, they should take their business to a professional company off this campus.

I recently required a resume be typeset and contracted the Cal Poly's University Graphic Systems (UGS) to perform this service. I chose them because they were less expensive than professional print shops. I now regret

that decision because I have realized that UGS' workmanship and business practices are poor. The resume they produced for me was full of obvious typesetting errors. Also, I was told that the errors would be corrected in one day's time, but when I returned the next day, my resume was still not ready.

Sure, UGS is less expensive, but the hassle and poor quality is not worth saving a few dollars!

## Student combines old and new in American dream

by Michael Marter  
Staff Writer

The American Dream is alive and well at 296 Buckley Road.

After five years of hard work, little social life, and seemingly unbounded enthusiasm, 25 year-old business major Gary Finegan owns San Luis Customs, an auto body and paint shop he conservatively estimates as being worth \$30,000.

Finegan and a partner (who he later bought out) began working for themselves in a one-car garage six years ago. "We had about two-hundred bucks between us," said Finegan. The business soon outgrew that location.

Finegan moved into his present 2,500 square foot facility in late 1979 and promptly installed a bathroom, office, wiring and the largest paint booth in San Luis Obispo, which he purchased used and in pieces. He reassembled the booth and now has the capability to paint even the largest trucks in a dust-free, well-ventilated environment.

Finegan and his two employees have the capability to do nearly every phase of auto body and paint work, and will increase their capabilities in the future. After graduating this June, Finegan plans to borrow funds to expand his shop to triple its present size. He also plans to buy a digital tintometer (a machine that takes a great deal of the guesswork out of matching paint colors) and a small computer armed with software designed to streamline estimating,

scheduling, and overall shop organization. Both machines will be unique among San Luis Obispo auto body shops, he said.

Finegan explained that the computer could also be used for direct mail advertising and several mail order ventures he is considering.

But along with the new, Finegan incorporates some of the old. He has become proficient in what he calls a "lost art" that of using lead as a body filler rather than the quick and inexpensive plastic fillers in common use today. He also believes in a personable approach when dealing with his customers. "I like to tell the consumer exactly what they are getting. I stress service—something the other shops don't stress," Finegan said.

Finegan is quick to praise the benefits of his education at Cal Poly. He said his dual concentration of management and marketing, and the business plan he developed for his senior project enabled him to make a comprehensive evaluation of his business—both its present status and his objectives for the future.

"I definitely believe in that learning by doing philosophy," Finegan said. "It's a lot easier to learn things when you are actually doing them. It sure made accounting more interesting," Finegan said, chuckling.

While working 40-50 hours a week at his shop, the San Luis Obispo native has managed to maintain "almost a B average." "But combination of work and school plays hell on your social life," he said.

Mustang Daily — Michael Marter

Gary Finegan replaces a rear window outside his San Luis Customs auto body and paint shop.

Applications for Mustang Daily Editor are now being accepted. Deadline is May 4 and applications should be submitted to current Editor's box in Graphics Building Room 226

## Statistics show stereotyped Poly student is true

by Lisa Shidler  
Lifestyle Editor

The stereotypical Cal Poly student is a White, Anglo-Saxon Protestant of the lower to upper middle class level. But how true is the stereotype?

According to statistics by the university's Institutional Research Office the stereotype comes pretty close.

Institutional research is the study of almost any aspect of the university, according to Tom Dunigan, director of the research office. Dunigan has the responsibility of studying enrollment data, projection enrollment for the future, and reporting data about Cal Poly faculty, enrollment and class size to the California State University Chancellor's Office.

Statistics indicate 86 percent of the campus students are classified as White Non-Hispanic (based on first time freshman enrollment in fall, 1982) in the CSU system, only Humboldt (90 percent) and Chico (88 percent) have a higher share of white students. Cal State Los Angeles has the lowest percentage of whites at 15 percent, and the second lowest is Dominguez Hills with 26 percent.

Of the eight classifications of ethnic backgrounds recognized by CSU, Cal Poly has the lowest percentage of blacks, second to the lowest percentage of Mexican-Americans, and the third lowest percentage

of American Indians, Filipinos, and Hispanics other than Mexican.

No longer can Cal Poly boast a ratio of four men to every woman as it did more than a decade ago. In the fall of 1982, women made up 44 percent of Cal Poly enrollment. This compares to only 29 percent women in 1970.

The percentage of women has increased in every school. In 1970, the School of Agriculture included 19 percent women, which increased to 41 percent in 1980. Women made up only one percent of the students in the School of Engineering and Technology in 1970. That figure rose to almost 14 percent in 1980, which represents an increase from 25 to 456 women.

Where do Cal Poly students come from? In Fall 1982, 23 percent of the semester's term enrollment listed San Luis Obispo, Monterey and Santa Barbara counties as their places of origin. Twenty-two percent said they were from the San Francisco Bay area, and the same amount said they were from the Los Angeles area. Twelve percent came from the Central Valley area and five percent from San Diego County. Students from other states or foreign countries made up 5 percent.

And true to the stereotype, Cal Poly students apparently come from high-income families. Prospective applicants to four-year colleges across the nation in 1980 reported a median parental income of \$22,400.

Cal Poly prospective applicants reported a higher median parental income of \$27,700, while those that actually enrolled showed a median of \$28,700.

Those who attend Cal Poly are serious students. The average units taken in the fall by undergraduates of the CSU system were 12.41 in 1982. But at Cal Poly, the average was 14.14. Poly students take more units in the winter quarter than other quarters, while taking the least amount in spring quarter, not including summer. But these numbers have steadily decreased since 1970, when the average Cal Poly undergraduate took 15.35 units in fall.

Cal Poly students also have high continuance rate — the highest in the CSUC system. The freshman class of 1973 showed 55 percent of being either graduated or still in attendance through seven years.

There are only 852 post graduate students at Cal Poly. Most are working towards masters degrees; some are obtaining a second bachelor's degree, and others are seeding teaching credentials.

So many undergraduates leads to a young average campus age. For full-time students, the average age is 21.6 years, but part-time students ages average out to 25.9 years, (Fall Quarter, 1982). Students 21 or younger made up 35.5 percent of the total enrollment in fall 1982 which was lower than in 1970 at 40.9 percent. Only 23.9 percent of the

## Excitement!

The challenge you've been waiting for, hoping for, training for, is just around the corner. Soon you could be working on the leading edge of one of AMD's high-performance technologies.

- Advanced Bipolar process to double circuit density
- Advanced telecommunications products
- Multiproduct solutions for Local Area Networks
- Developing new CAD Resources

With your BS, MS or PhD in Electrical Engineering, Solid State Physics, Materials Science or Computer Science, you'll find all the technological excitement your career can handle at AMD. And all the rewards. We will pass \$550 million in sales for fiscal 1984 and our sights are set on breaking new records.

If you crave the excitement of the world's fastest growing semiconductor company...

## Serious students learn how to get good grades

by Leanne Alberta

Staff Writer

To Cal Poly students, the word grades means only one thing — they're those formidable little letters that symbolize the work and effort, or sometimes the lack of work and effort, that a student has managed to accomplish during the course of a quarter.

Some take a happy-go-lucky approach to the process, thinking that any grade is OK as long as they don't have to repeat the class. But for others, getting anything but the highest grades is something they don't allow.

Liz Cline, a Natural Resources Management Senior, received a 4.0 GPA last quarter and wouldn't be happy with a D in any class, regardless of its difficulty. She carried 16 units last quarter, including her second quarter senior project.

"After five years of college, I've learned how to budget my time," Cline explained. "There's a big difference between high school and college, and it just takes time to get used to the change."

Cline is planning to graduate this quarter, but not without paying her dues first. "This is my seventh straight quarter without a break, so I'm starting to feel a little burnt out," she said.

Cline explained that she likes to "get rid of my homework first, and then I go out and do other things besides studying."

"I set up a schedule for studying and I pace myself, but I've always been a conscientious student," Cline said. "Natural Resources Management is a hard major. A lot of people say it stands for 'normal major,' but you have to take a lot of biological sciences and they are difficult."

Denise Holton is an Animal Science major-pre-vet, and has a 3.5 GPA. She admits that so far it hasn't been too difficult to keep her GPA high. "I've been taking ag classes and I know a lot about the things we study beforehand," Holton explained.

Holton also admits that she is a bit of a procrastinator. "I always wait until the night before a test to study, but I wouldn't recommend this for everyone."

"There's a lot of pressure on me to keep my grades up so I can transfer to Davis," Holton said. "If there's one piece of advice I would give to students who want to raise their GPA's, I'd tell them never to miss classes. When you're on the quarter system, everything moves so fast and it's easy to get behind."

Grades and a high GPA are very important to Lisa Cote, a Senior Business

major. "It's sometimes hard for me to keep my grades up, but I'm motivated. All I have to do is think about all the money I'll earn someday," Cote joked.

Cote said she tries to maintain an even balance between her social life and her studies.

"Sometimes I feel pressure because if I get a good grade on a first test, I feel obligated to maintain good grades in that class," Cote explained.

Regina Risi, a Sophomore English major, also feels pressure to continue her 3.5 GPA. "If I know I can get an A in a class, and I don't, then I feel bad," she explained.

"I used to procrastinate, but I didn't like my grades when I did, so now I'm learning to get things done early," Risi said.

Most students at Cal Poly know how hard it is to keep up their grades. If by chance they forget, they are quickly reminded by the words "ACADEMIC PROBATION", typed prominently along the bottom of their report cards.

Further proof of Cal Poly's tough academic standards can be found on one residential hall floor, which requested anonymity, where one-fourth of the students are currently on academic probation.

## Poly students stereotyped

From page 4

students in the CSU system in 1982 were younger than 22.

The largest number of majors at Cal Poly is in Business Administration, which had 1,375 students in 1983. Agriculture Management had the second largest enrollment with 900 students, Architecture is third with 829.

In 1983, the school of Engineering and Technology had the most students with 3,294, followed by the School of Agriculture and Natural Resources with 3,442. The School of Human Development and Education had 2,222, the third largest number.

What about all of the young people graduating from high school who wish to continue their education at Cal Poly? Statistics show that approximately 10,000 applications are received by Cal Poly each year, for example, 10,350 people applied to Cal Poly in 1983. Of these applicants, about half will be given space reservations (5,780 in 1983). And of those given space reservations, about two-thirds will actually enroll at Cal Poly as new students (3,234 in 1983).

4,570 people were not accepted in 1983. They may have been lucky ones. They could have turned into just another Cal Poly statistic.

## Employers come to job-hunters for Ag seminar

by Frank Van Brocklin  
Staff Writer

A career seminar held this week had advantages for the business future of the agricultural students and companies who attended.

The Cal Poly National Agri-Marketing Association arranged for eight major agricultural firms to visit the campus.

Lisa Scanlin, the assistant chair for the seminar, said the primary advantage of the seminar was its directness.

"Our main goal was to get information to the students directly from the companies to help them decide and set their career goals," Scanlin said.

Before the seminar, students had to learn about the companies indirectly from fellow students who had previously interviewed or had internships with the companies, she said.

Scanlin said several students were able to set interview appointments with the companies while representatives were in San Luis Obispo.

Even if students did not set up interviews, the contacts made at the career seminar may be important in the future, she said.

"If they ever go in for an interview with a company, the students may not know their interviewer, but they'll be able to point to someone they met here and say they talked quite a bit with them about the company and its goals," she said.

Steve Parker, a district sales manager for Ciba-Geigy, said the seminar had definite advantages for the companies as well as for the students.

"One thing about the seminar is it allows us to see larger numbers of students in a shorter period of time," Parker said.

He said the seminar was more efficient than working through the Career Placement Center because at the seminar companies could work with the students directly and decide who to interview further.

Parker said agricultural students at Cal Poly had one advantage over other agricultural students.

"Generally, Cal Poly students are on a higher par or maybe a more mature level business wise than other students," he said.

Willie Reeser, director of corporate relations for Loomix, said the career seminar at Cal Poly had a size advantage over career seminars at more

agriculturally-centered schools, such as Texas A & M. Reeser said the small size of the seminar allowed him to spend more time with each student, and develop a more personal relationship with each, than he would have been able to at a larger career seminar.

Reeser said Cal Poly agricultural students were as business-like as students anywhere. "I'm amazed at the amount of good young people I meet everywhere I go. I can say that with real conviction," Reeser said.

The company representatives and student organizers were pleased with the turnout for the seminar.

"The turnout certainly has been adequate because we've been busy since we got here," Parker said.

"We had a lot of students coming in, and the companies were really prepared with brochures and other materials to give them," Scanlin said.

Planning for the seminar began about three months ago when invitations were sent to 150 companies. Of those, eight offered to send representatives.

"We called the other companies, and they said they didn't get our letters," Scanlin said. "This is a good start for next year though. The other companies will see how well it went and want to come next year."

The companies represented at the agricultural career seminar were Altamont Computer, Ciba-Geigy, Fidelity Union Life, International Harvester, Loomix, Monsanto, Production Credit Association and Salyer-American.

## Aluminum can proceeds for handicapped

by Julie Rach  
Staff Writer

During Poly Royal, tens of thousands of aluminum cans are thrown away, wasting a valuable natural resource and creating litter in the process.

The Ecology Action Club and Student Community Services would like to change that. They will have boxes set up in major food service areas during Poly Royal for the collection of aluminum cans.

"Recycling aluminum is probably the most efficient method of recycling," said Bob Wolf, Ecology Action Club adviser. Ninety-five percent of the energy needed to make aluminum from ore is saved through recycling.

The boxes will be designated for aluminum cans only and will have can sized holes in the side for deposits. Wolf said the Ecology Action Club tried this plan a few years ago, but was unsuccessful because the collection containers looked too much like trash cans.

"People just don't read," said Wolf.

Signs will also be posted at all locations selling aluminum cans asking people to recycle their cans.

The cans will be collected by members of the Ecology Action Club and SCS and will be given to the Friendship School Day Training and Activity Center in San Luis Obispo, a school for handicapped children. Proceeds from the recycling will go to the school.

"Half the cans in California are now being recycled," said Wolf. "That's better than it was, say, 20 years ago, but half the cans are still being wasted."

Ken Dintzer — Mustang Daily

Cal Poly men's tennis player David Reynaldson, ranked No. 24 in the nation, will compete in the Olympic Trials April 31.

## Four Cal Poly men netters picked for All-CCAA team

by Sherman Turnline

Staff Writer

The Cal Poly men's tennis team not only captured the California Collegiate Athletic Association championship last weekend, but also has four players who were chosen All-CCAA.

It was the first time in five years that coach Hugh Bream's netters have won the conference championship.

Mustang players that were chosen All-CCAA were Rob Pritzkow with a league record of 8-2; Randy Havens, who also posted an 8-2 mark; Thor Holt was selected with a conference record of 8-1; and freshman Mike Giusto endured

conference play with an unblemished record of 8-0.

Pritzkow and Havens team up to feature the No. 1 doubles team in the West for Cal Poly, while Holt and Giusto make another consistent doubles team for the Mustangs.

The CCAA teams are U.C. Riverside, CSU Dominguez Hills, CSU Northridge, Chapman College, CSU Los Angeles, Cal Poly Pomona, U.C. Irvine and CSU Bakersfield.

The team will host their last match of the regular season on Tuesday, April 24, against U.C. Santa Barbara at 2:00 p.m. on the upper tennis courts.

### Classified

Student, faculty & staff daily rates are \$2.00 for the first 3 lines, and 50¢ for each additional line. Campus Clubs and Greeknews and Personals are half price. Advertising for 4 or more days cuts the price in half for all categories.

Payable by check only to Mustang Daily. Non-Campus & Business rates are slightly higher. Ads must be submitted before Noon on the UU information desk or in GA226 to begin 2 working days later.
